# Shubham Deshamukh

9356480168 sdeshmukh0168@gmail.com linkedin github

## Professional Summary

DevOps Engineer experienced in deploying scalable, highly available infrastructure on **AWS** (EC2, VPC, Auto Scaling, RDS, CloudFront). Skilled in **CI/CD** (Jenkins, GitHub Actions), **containerization** (Docker, Kubernetes), and **Infrastructure as Code** (Terraform). Proficient in Linux administration, shell scripting, and monitoring with CloudWatch, Prometheus, and Grafana. Focused on building reliable, automated, and secure cloud delivery pipelines.

## Education

**Dr. Babasaheb Ambedkar Marathwada University** **2025**
*Bachelor of Computer Application (BCA) |63%* *Ch.Sambhaji Nagar, Maharashtra*

Higher Secondary (12th) | 78.67%

Secondary School (10th)| 71.40%

## Projects

**E-Commerce Microservices Application** | *GitHub, Docker, Kubernetes, AWS EKS, ArgoCD, RDS*

- Architected and deployed a production-grade microservices application on Kubernetes (AWS EKS) using Deployments, Services, and Ingress Controllers managing independent services with zero-downtime rollouts.
- Built end-to-end CI/CD pipelines using GitHub Actions reducing release cycle time .
- Automated deployment workflows reducing manual effort by and improving release consistency.

**AWS Alerting and Monitoring System** GitHub | *AWS EC2, RDS, ALB, CloudWatch, SNS,Prometheus, Grafana, Docker*

- Monitored AWS infrastructure including EC2, RDS, Application Load Balancer, Lambda, and EKS to ensure system reliability and uptime.
- Used Ansible playbooks to automate installation and configuration of Prometheus and Grafana across servers.
- Built interactive Grafana dashboards using Prometheus to visualize infrastructure health and performance metrics.

**Reusable Terraform Modules for AWS Scalable Infrastructure**

- Developed a Three-Tier AWS Infrastructure using Terraform with a modular architecture.
- Created reusable Terraform modules for VPC, Frontend, Backend, Database, Bastion, ALB, Target Groups, and Auto Scaling Groups (ASG).
- Automated provisioning of EC2, VPC, Subnets, Route Tables, Internet Gateway, NAT Gateway, Security Groups, ALB, Target Groups, and ASG.
- Configured Application Load Balancer (ALB) with Target Groups and Auto Scaling Groups (ASG) for high availability and scalability.
- Managed environment-specific deployments using Terraform modules, variables, remote backend, and Git/GitHub.

## Technical Skills

**Cloud Platforms**: AWS (EC2, S3, RDS, IAM, VPC, CloudWatch, CloudFormation)
**Containerization & Orchestration**: Docker, Kubernetes, AWS EKS, Helm, ArgoCD
**CI/CD & Automation**: Jenkins, GitHub Actions, GitOps
**Infrastructure as Code**: Terraform, AWS CloudFormation
**Version Control**: Git, GitHub, Pull Requests, Code Reviews
**Monitoring**: AWS CloudWatch, Prometheus, Grafana
**Operating Systems**: Linux Administration, Networking, File Systems, Process Management
